

# CargoVan

PRESENTATION

## Introduction to **CargoVan**

The CargoVan is a robust and efficient solution designed to **optimize data transmission to the government agent systems**, enabling Carriers and Freight Forwarders to carry out cargo manifesting and linking processes (currently performed on the Mercante website) quickly, securely, and automatically.

**See how CargoVan can  
transform your operations  
and deliver significant benefits**

# How does it work?

## Customized and flexible integrations

CargoVan receives cargo data through **various integrations, such as EDI, API, or CSV file uploads**. Data reading can be customized to virtually any format, ensuring flexibility for data input into the system. Additionally, for customers already using our **DraftWeb**, **the integration between the two platforms is native**, meaning it is fully automated, eliminating errors and the need for manual processes.

# Intuitive data handling

Once cargo data is imported into the system, CargoVan provides an intuitive and user-friendly interface, enabling operators to update Bill of Lading (BL) information in batches and quickly add item lists to BLs. It also performs validations to prevent duplicate entries of BLs, chassis, containers, and MAFls (except in part-lot cases).

This improves efficiency and **reduces time spent on repetitive processes.**

## Secure transmission and error correction

With just one click, the **manifest data is transmitted directly to Mercante**. If there are any inconsistencies, CargoVan precisely indicates where the errors are with a detailed message explaining the issue, **allowing for quick corrections**. Once the correction is made, the data resubmission occurs in a simplified manner, ensuring that the process is successfully completed.

# Log recording and file monitoring

All files sent to Mercante and the success or error returns are recorded in the system, allowing for **thorough auditing and control**.

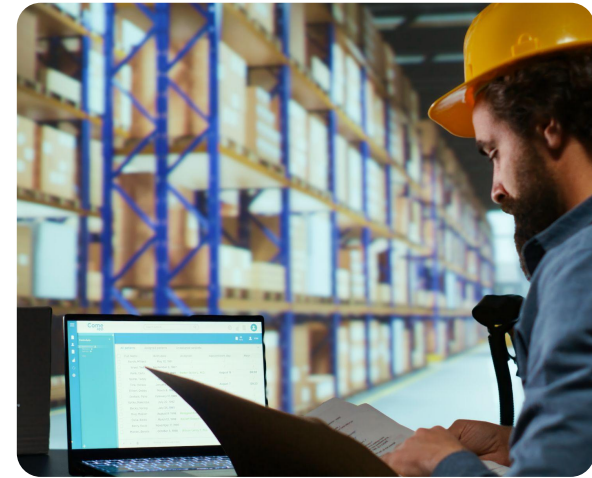

In addition to logging all actions performed in the system, that provides **security and traceability at every stage**.

# Manifest linkage

After the cargo manifestation, **CargoVan** also automates the linkage of manifests to calls! Even if the customer has not contracted the calls module, it is possible to manually input the data and trigger the automatic linkage of calls to the manifest in Mercante.

# Calls module with ETA monitoring

For clients who choose the Calls module and keep the ship schedules updated, the system **automatically suggests the calls to be linked to the manifest**. Additionally, based on the ship's ETA, the system sends **periodic alerts for manifests that are not yet linked to calls**, ensuring that operators do not miss the linkage deadlines and thus avoiding fines and penalties imposed by the government agencies.

# Manifest of Empty Containers

The solution also integrates with Mercante to manifest empty containers! It allows for the import of lists of empty containers in CSV format.

## Reduction of errors, fines and delays

CargoVan significantly **reduces processing time and manual data entry into the Mercante system, minimizing errors and delays.** The tool helps prevent fines by streamlining the process from EDI reception to transmission, ensuring timely manifest and link submissions. Additionally, it reduces the workload on teams, increasing operational efficiency.

# Benefits for your operations

- ➡ **Complete automation** of manifestation and linkage processes.
- ➡ **Error reduction** in transmissions and quick correction of inconsistencies.
- ➡ **History and traceability** of all interactions with Mercante.
- ➡ **Prevents fines** due to missed deadlines and inconsistencies with automatic alerts.
- ➡ **Native integration with DraftWeb** and the ability to consume maritime APIs.

**Optimize your operations,  
achieving tangible results  
through cost reduction  
and increased efficiency**
