

CheckList

PRESENTATION

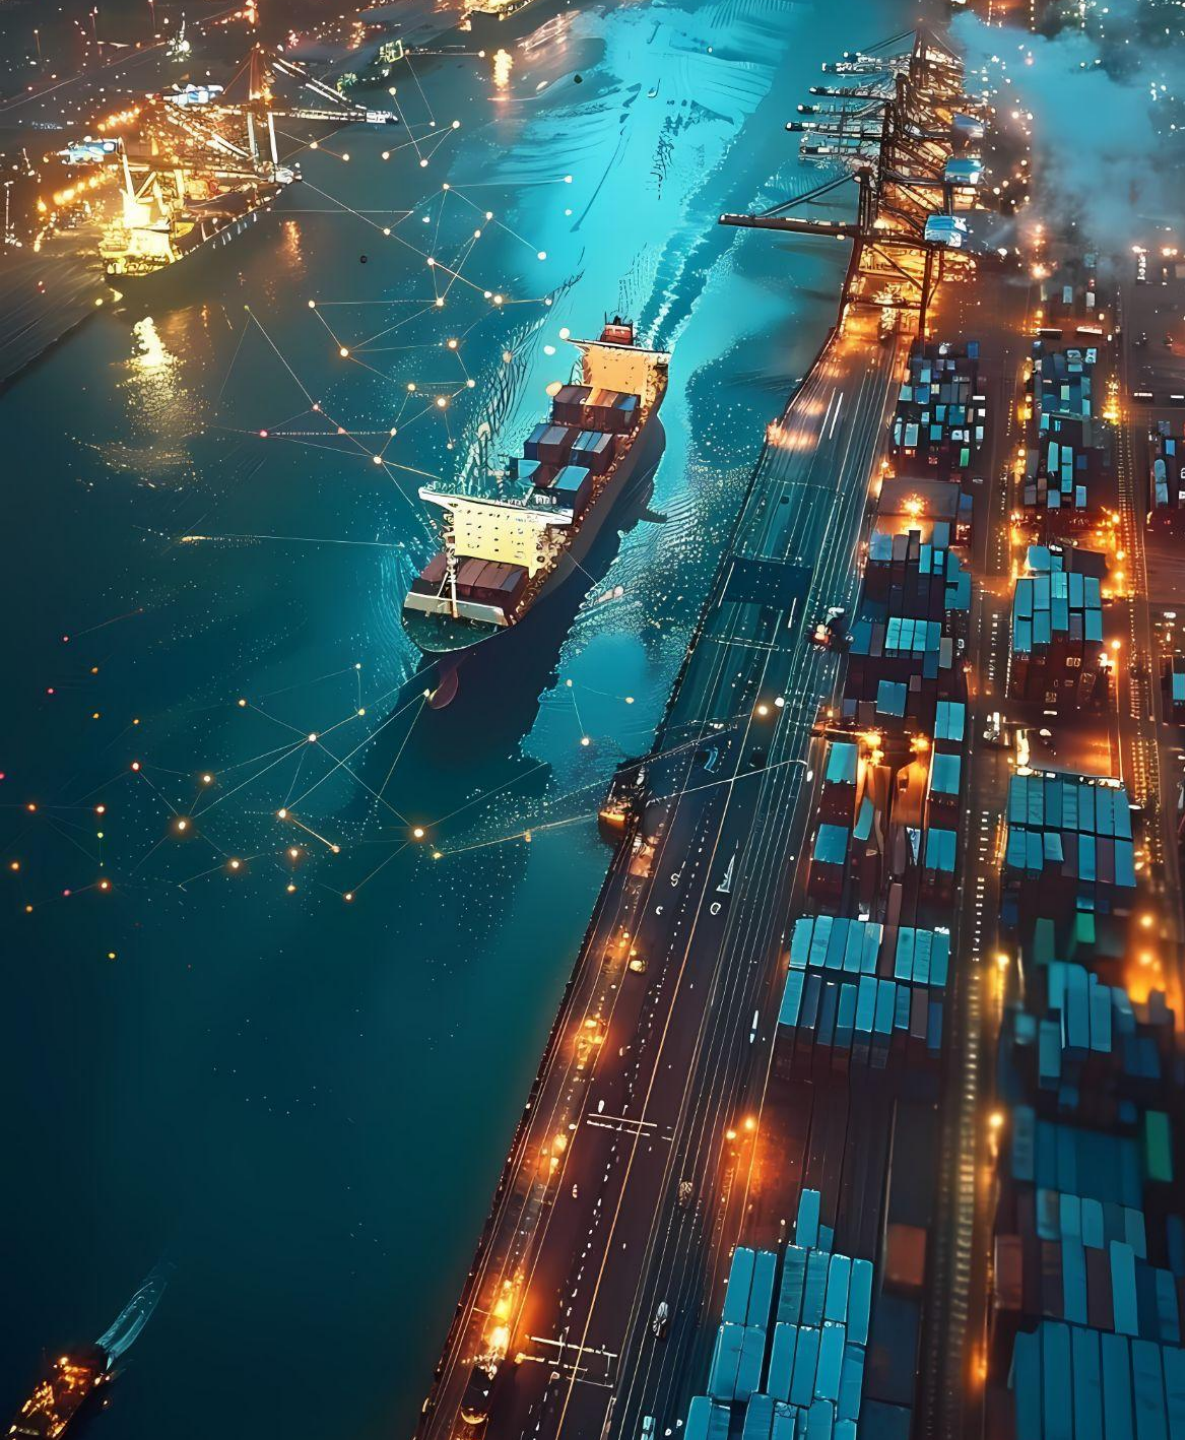

Introduction to **CheckList**

The Checklist is an essential platform for shipping agents seeking **comprehensive control of ship operations**, from pre-arrival at the port to post-departure.

With an intuitive and user-friendly interface, the Checklist **allows the recording of data and operational events** for container ships, bulk carriers, tankers, and other types of vessels.

A man with a beard, wearing a red shirt and a safety vest, is looking at a tablet. The tablet displays a map with various lines and markers. The background is a blurred indoor setting with lights.

**The essential tool for
the efficient management of
ship operations at ports**

Calls Integrations

Internal Systems

Integrates with your systems via **API** or **spreadsheet upload** of the ship schedule to create calls in the system.

Integration with Mercante

The system offers **integration for call creation and monitoring of changes within Mercante**, automatically updating the system.

How does **it work?**

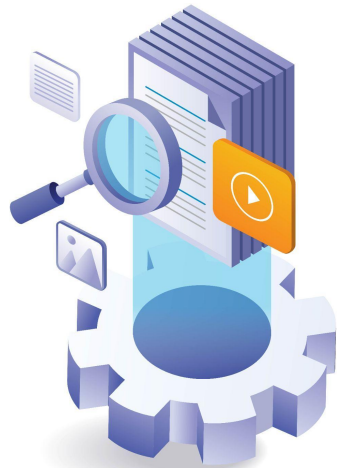

From a call, it is possible to create checklists and **manage ship operations with complete control and transparency**. During the process, the responsible agent can easily update the checklist, **even via mobile**. The interface simplifies task prioritization at each stage of the operation, taking into account the type of cargo being handled.

Smart Actions and Automation

Operational Alerts

The system provides **proactive alerts** about key operational event deadlines based on the type of cargo. This ensures agents stay on schedule and keep the system continuously updated.

Automated Reports

With ready-to-use email templates, such as **Arrival, Berthing, and Sailing Reports**, you can notify stakeholders with a single click, keeping everyone informed about the progress of the operation.

Advance Features

SOF (Statement of Facts)

The system automatically generates the SOF based on the data entered during vessel operations, eliminating rework.

Control Panel

A consolidated view of calls by port with key information and real-time required actions, ensuring smooth operations.

Port Closure

In the event of a port or terminal closure, the system sends automated emails to notify affected vessels and provide updates on the resumption of operations.

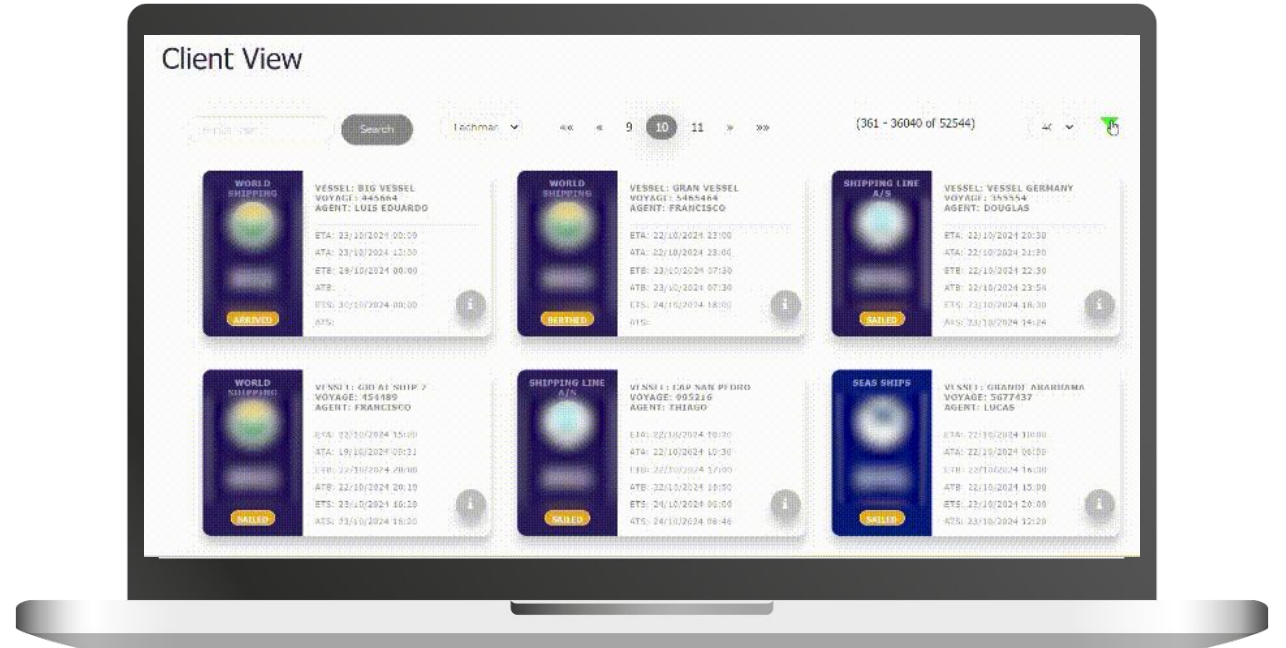

KPIs

Monitors performance indicators related to the deadlines of critical actions required for the operation.

Client View

The Client View allows customers to monitor everything happening with their vessels in real-time, including operation photos. They can also view and download reports whenever needed.

With the Checklist, your agents have everything they need to deliver fast, accurate and transparent services
