

DraftWeb

PRESENTATION

Introduction to DraftWeb

DraftWeb is an agile, **user-friendly platform for exporters and importers** to enter the necessary data **to generate transportation documents such as BLs, CTEs, and DTAs**. It offers a drastic reduction in errors, saving time and resources without compromising security, providing greater convenience.

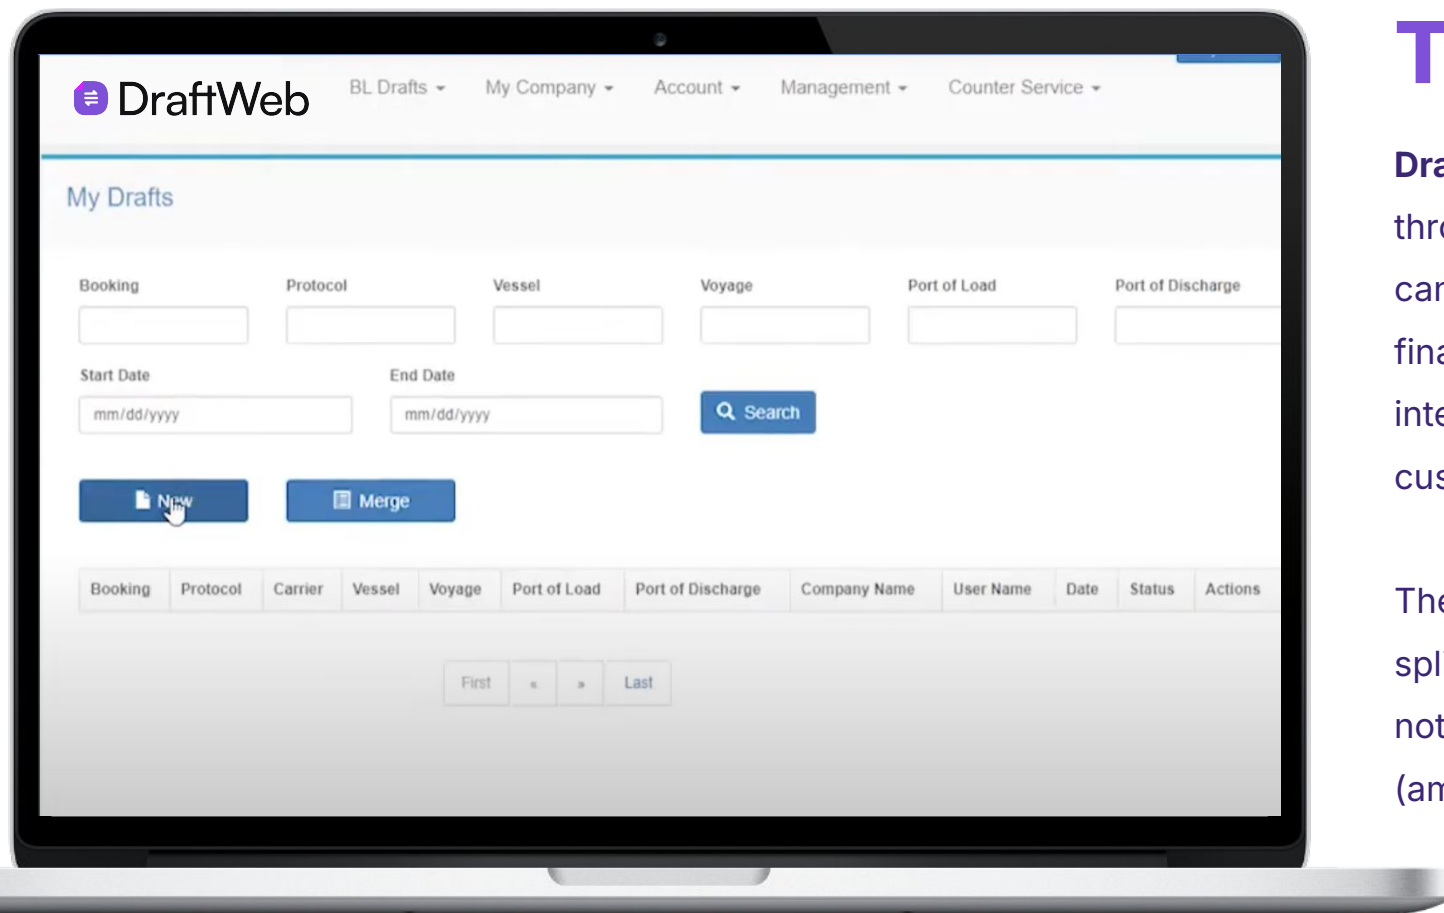

**Faster and more secure
draft generation and issuance
of BLs, CTEs, DTAs and more**

The Challenge

Gerar documentos de transporte, como BLs, CTEs e DIs, é um processo complexo. O principal desafio é receber todas as informações necessárias de exportadores e importadores de forma completa e dentro do prazo, para que armadores e agentes de carga possam compilar os dados no formato adequado e transmití-los rapidamente às autoridades. Atrasos ou retificações fora do prazo podem resultar em multas, comprometendo a eficiência e gerando custos indesejados.

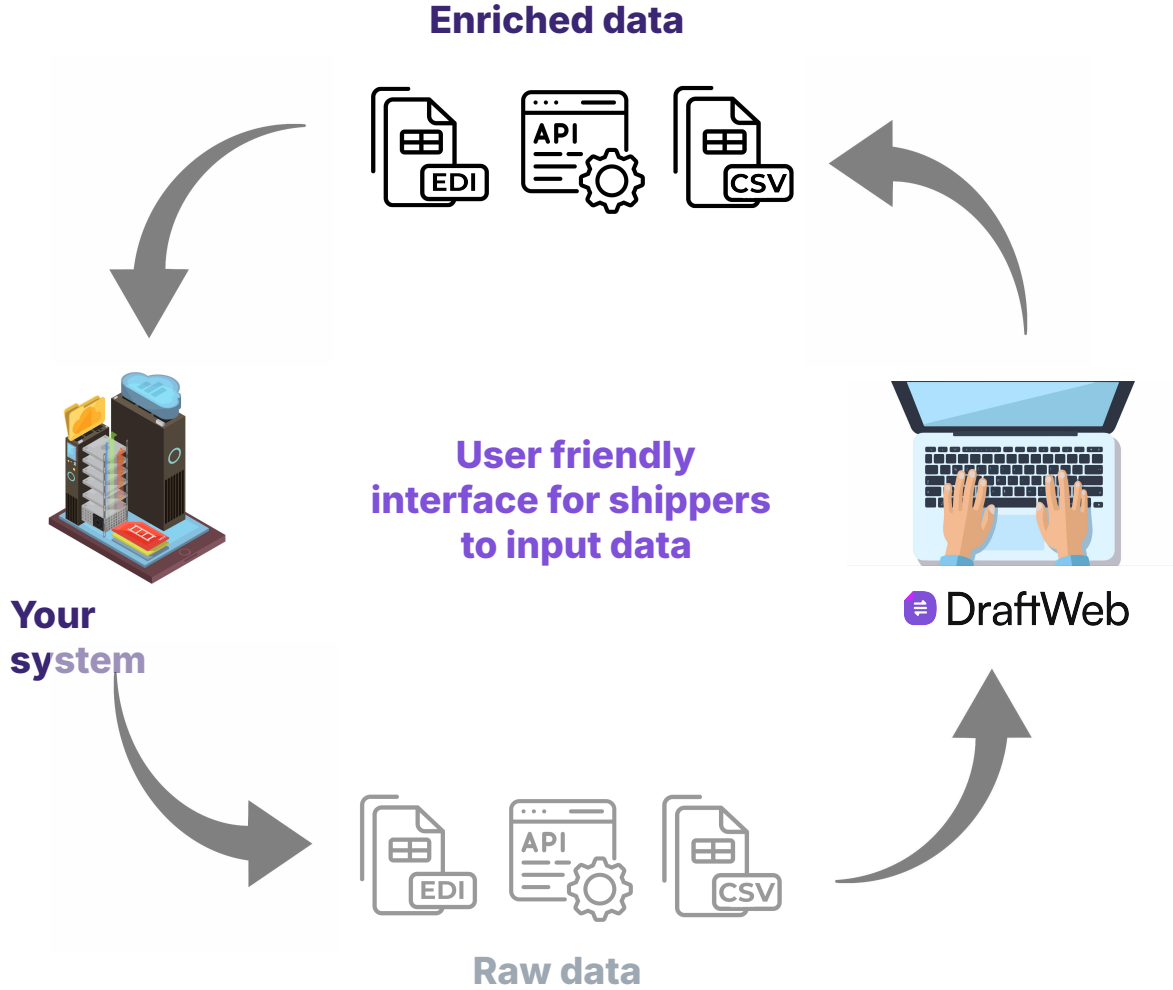

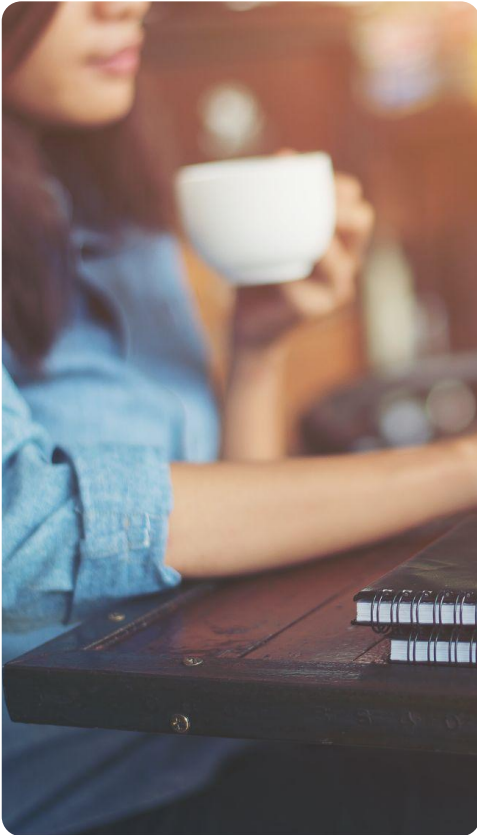

The Solution

DraftWeb collects raw data (such as booking information) through integration or manual input. Exporters and importers can easily fill in detailed cargo information. Once the draft is finalized, validated, and reviewed, the complete data is integrated back into the shipping company's system through a customized integration.

The platform also provides: booking information validation; split document; approval workflows; action-required notifications; request modifications after finalization (amendment ticket).

How Does It Work?

Benefits of **DraftWeb**

**Error and
Disruption
Reduction**

**Time and
Resource
Savings**

**Security
and
Reliability**

Convenience

DraftWeb

Key Features

Booking Data Input: Through customized integrations or manual entry

User-Friendly Draft Creation: Including copy features from existing documents

Booking information Validation

Approval Workflows

Output Integration: Seamless data output via integration or manually

Amendment Flow: Request changes even after draft completion

Shipping Confirmation and Document Recipient Definition

Payment Control: Optional ERP system integration

DraftWeb Differentials

-  **Customization**
Easily create new document templates and adapt workflows
-  **System Integration**
Flexible input and output formats (JSON, TXT, XML, CSV, XLS, etc.).
-  **Support**
Quick response for integration issues and new feature development
